

The transportation system leaves an impact. That is why we are becoming a team that is

100% sustainable.

We live in a world that is constantly changing with events that are affecting our current lifestyle and that will force us all to change our habits if we want to preserve the planet and leave future generations a sustainable world. This 2020 itself has probably brought us the greatest change with COVID19, which will undoubtedly change everything we have known until now.

GLOBAL TEMPERATURE & CO2

We, as ABARCA Sports, have a great responsibility for our public repercussion in proceeding with responsible and sustainable attitudes that not only help preserve the environment but are also an example to society.

Due to this and other current global trends, at ABARCA Sports we have identified an opportunity to join and direct the team towards a fully sustainable company committed to society and the environment, this being a fundamental part of the company's DNA. For this we have prepared a complete CSR action plan to be implemented over time and that with the help of all, we hope to launch in 2020 with different actions within the rest of this season.

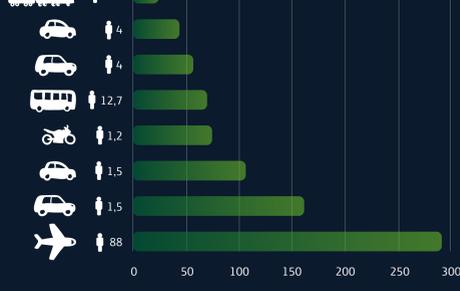

- TRANSPORT
- ELECTRICITY
- INDUSTRIES
- COMMERCIAL & RESIDENTIAL
- AGRICULTURE

How will we achieve this?

The first action we have already taken is the measurement of the carbon footprint, CO2 that ABARCA Sports emits towards the planet. This first step is essential for our recognition as a sustainable company.

What does the carbon footprint do?

The carbon footprint measures the amount of greenhouse gases (G.H.G.) that a company emits throughout the year in the course of its activity. Within the G.H.G. CO2 is the most abundant and responsible for climate change.

How is the carbon footprint emission calculated at ABARCA Sports?

The carbon footprint calculation identifies the G.H.G. produced by the fuels used to move the equipment and the energy consumption of the company's facilities.

Why do we measure this?

Once the carbon footprint issued is known, the company undertakes its responsibility to reduce it by a percentage and, where appropriate, compensate it within the established time.

Abarca Sports Carbon Footprint

Tons of emitted CO2eq	175,37
Tons. of emitted CO2eq / People	2,14

The importance of transformation towards a sustainable company in our sector

With the calculation of ABARCA Sport' carbon footprint, the company leads a climate emergency plan aligned with the sustainable development goals set for 2030 by the United Nations Organization. This places us at the forefront, within the world of cycling, not only as a concerned and updated team in terms of sustainability and the environment, but as a benchmark in the pursuit of the 0 emissions target.

The benefits of this transformation

- 1 Improvement of corporate reputation and positioning with all our sponsors, collaborators and society in general.
- 2 First Spanish cycling team committed to sustainability and the fight against climate change.
- 3 At the head of World Tour teams and sports organizations worldwide with a real sustainable strategy.
- 4 Better positioning towards new sponsors. In today's world, large companies and investors have placed CSR as a fundamental element in their strategy and therefore a key point to justify and sustain their investments.
- 5 Becoming a loudspeaker, educational reference and example for other organizations in the world of sports in everything related to social and environmental sustainability.

#RodamosJuntos towards a sustainable team.
